APPLIED MATHEMATICS AND COMPUTATION

VOLUME 82

R. Van Keer and H. De Schepper
Finite Element Approximation for 2nd Order Elliptic Eigenvalue Problems with Nonlocal Boundary or Transition Conditions 1

Yi-Fa Tang, Víctor M. Pérez-García, and Luis Vázquez
Symplectic Methods for the Ablowitz-Ladik Model 17

Rudolf Scitovski
Analysis of a Parameter Identification Problem 39

A. M. Barry, S. M. A. Burney, and M. I. Bhatti
Optimum Influence of Initial Observations in Regression Models with AR(2) Errors 57

Paul Nelson and Daniel L. Seth
Integrodifferential Equations for the Two-Dimensional Transition Kernels of Invariant Imbedding 67

Ioannis K. Argyros
On the Convergence of Two-Step Methods Generated by Point-to-Point Operators 85

He Song-nian and Guo Ben-yu
Chebyshev Spectral-Finite Element Method for Three-Dimensional Unsteady Navier-Stokes Equation 97

F. Szidarovszky
A Note on the Alternating Offer Method 129

F. E. Udwadia and N. Raju
Dynamics of Coupled Nonlinear Maps and Its Application to Ecological Modeling 137

(Continued)

JIRI FRIDRICH
Discrete-Time Dynamical Systems Under Observational Uncertainty 181

PINGZHOU LIU AND K. GOPALSAMY
On a Model of Competition in Periodic Environments 207

A. CHARAFI AND L. C. WROBEL
A New *h*-Adaptive Refinement Scheme for the Boundary Element Method Using Local Reanalysis 239

J. I. RAMOS AND C. M. GARCÍA-LÓPEZ
Piecewise-Linearized Methods for Initial-Value Problems 273

VOLUME CONTENTS
